Dear Dr. Smallwood:

Attached per discussion last week is the "Summary of Literature on Alternative Methods of Donor Interviewing," with selected articles and a complete reference list, for copying and distribution to members of the Blood Products Advisory Committee for their September 12, 2002 meeting. It is targeted on the segment on "self-administration of the uniform donor history questionnaire: first time donors" and was authored in conjunction with Louis M. Katz, MD, of the Mississippi Valley Regional Blood Center.

We have most of the materials in machine readable files so if you need them in a different format, such as a separate reference list, please advise and we will endeavor to satisfy the requirement rapidly by email. Additionally, we have reprints available for reference # 10, the Zuck/Cumming/Wallace article, but my notes indicated you did not have the ability to distribute them. If this information is in error, please advise and we can rapidly supply the reprints.

Also as discussed, we will plan on making about a 10-minute presentation further summarizing the attached at the meeting.

Thank you for your assistance.

Sincerely,

Paul D. Cumming, PhD  
President

cc: LM Katz, MD
